OF ANIMAL BY-PRODUCT PLANTS

VENDOR DUE DILLIGENCE: ENVIRONMENTAL RISKS IN ACQUISITION PROCESS

Environmental risk assessment

Country: Poland
Region: locations at different regions
Client: Advisory company (subcontracting)
Year: 2017
Duration: 2 months
Value: - - -

Background:

In case of each acquisition a risk investigation in number of areas, including financial, legal and intellectual property is provided. Obviously, it also refers to the environmental aspects i.e. site contamination, incomplete documents etc. Serious irregularities identified at this stage may result in undermining the legitimacy of the whole acquisition process itself due to high compensatory costs for the new owner.

Scope of work:

Provided Due-Diligence, as a part of the comprehensive advisory, included all environmental aspects concerning analyzed facilities. Above all, legal status of all environmental permits, their completeness and correspondence between permits and actual state were considered. Additionally, identified information on complains and irregularities were analyzed as an important part of the final environmental risk assessment.
