

PROJECT: WROCŁAW

MAXIMIZING KNOWLEDGE DISSEMINATION:
ENVIRONMENTAL CITY GUIDE

POPULAR SCIENCE: PRECISE DATA FOR ALL

Environmental data publishing

Country: Poland
Region: Wrocław, Lower Silesian Voivodship
Client: City of Wrocław
Year: 2010, 2014
Duration: 3 months
Value: - - -

Background:

The XXI Century is an era of information society where distribution and integration of information is of major importance. It seems that in modern times all data are easily and freely available however in practice this issue is often more complicated. To give citizens a reliable and comprehensive view on the urban environment, a non-technical version of report is often required.

Scope of work:

Service included collection of all required input data coming from official published and non- published sources as well as close cooperation with different public entities active in the field of environment. All data have been unified and enhanced with graphics and adequate pictures. Moreover, all publishing preparations have been made. As a result a comprehensive guide on the city environment has been created - in printed and electronic version.
