

PROJECT: GREENFIELD

PROVIDING INFORMATION
BEFORE INVESTMENT START

IT'S GOOD TO KNOW: ASSESSMENT OF NEW INVESTMENT SITE

Support the key decision

Country: Poland
Region: different regions
Client: different clients
Year: since 2010
Duration: - - -
Value: - - -

Background:

It is not always possible to reuse old industrial sites for new investments. Irrationally high adaptation costs or unfavorable local conditions may be reasons for greenfield to be preferred. However, today's environmental standards require precise nature investigation before starting a new investment at the area of unspoiled environment. Especially a detailed analysis of nature values is needed.

Scope of work:

The service included a precise identification of every environmental aspect which might cause problems for further development of the planned investment. On-site verification and nature inventory was a part of the investigation. It also covered measurements and laboratory analysis of specified components of the environment to give a comprehensive view of the site in the final report before starting the investment.
